

Policy 10.00: Access to Technology

Missouri Southern is committed to providing equal access to all forms of technology for people with disabilities. The University is committed to complying with RSMo Section 191.863 Missouri's Information Technology Accessibility Standards. The University will take both a retroactive and proactive approach to ensuring access to technology and electronic information. The Assistant Vice President for Information Services in conjunction with the Coordinator for Student Disability Services will monitor technology acquisitions for accessibility and review all current technology for enhancement of accessibility for individuals with disabilities.

Due to the rapidly changing nature of technology and the varying needs of students with disabilities, not all possible technological options will be maintained on campus. Once a student has requested a reasonable accommodation that involves technology, every effort will be made to rapidly acquire the item. Items acquired for student use will remain the property of Missouri Southern.
